

# Ready by ArcheMedX

## Helping Oncology Leaders Improve Clinical Results

Life science and healthcare organizations use **Ready by ArcheMedX** to assess and prepare clinicians conducting clinical trials and treating Oncology conditions.

## Overview

The increasing focus on rare cancer indications and rise in personalization and use of immunotherapies in treatment requires better diagnosis and decision making, especially as Oncology trial starts reached historically high levels in 2021, up **56%** from 2016.

The current approach to equipping clinicians researching and adopting these therapies relies on outdated methods. ArcheMedX has demonstrated a more efficient and effective approach with major Oncology players - including Astellas, BMS, Daiichi-Sankyo, Genentech, Regeneron and others - to train and assess over **5,500 clinicians**.

### Improve clinician capability with *Ready*.

Clinicians using **Ready** are:

- **85% better prepared** to adopt new and emerging oncology best practices.
- **80% more capable** to accurately leverage genetic testing.
- **60% more confident** in effectively monitoring critical blood markers for new personalized therapeutics.

### Significantly reduce risk with *Ready*.

- In assessing 5,500+ Oncology clinicians, over **95% lacked knowledge and confidence in critical competencies** before completing training.
- Using **Ready** by ArcheMedX increased these clinicians' **mastery of key learning objectives by more than 8x**.

# A Better Way to Equip Clinicians in Oncology

**95%** of clinicians treating Oncology conditions were determined to be under-prepared to make good decisions in research and practice based on the analysis of more than **5,500** clinicians who engaged in Oncology-specific learning activities that included confidence-based assessment questions.

This risk can be reduced by delivering more tailored and effective on-demand training that improves clinician and study team readiness across key trial objectives.

## Ready reduces risk

After completing Oncology training activities powered by **Ready**, clinicians increased their mastery **8x** across key learning objectives.

**Ready** does this by:

- Transforming protocols, study docs, and training materials into interactive and tailored on-demand learning experiences
- Analyzing learning behavior as users engage around content to personalize training and deliver targeted remediation over time
- Measuring changes in learning behavior, knowledge, and confidence to predict and improve trial team performance

**Ready** improves clinical performance:

**87%**

More effective in screening Oncology patients

**70%**

More competent in preventing and managing AEs

**56%**

More capable of choosing an Oncology treatment plan
