

INTRODUCING READY BY ARCHEMEDX

The **clinical trials** learning platform that helps you **predict and improve** trial team and site **performance**.

With Ready, **uncover risks** and **eliminate clinical trial delays**.

Earlier than ever before.

Better teams. Better sites. Better trials.

Most clinical trials are fraught with delays, costs, and risks - related to project startup, site initiation, and ongoing study conduct. However, CROs can prevent most - if not all - of these challenges.

Imagine if you could more clearly demonstrate the capabilities of your team to sponsors in this challenging environment and win more business?

Imagine if you could quickly determine which CRAs, investigators, sites, and team members were most likely to be high performers in their trial - and enroll the right patients the fastest?

Imagine if you could front-load that trial with the sites and team members that were most likely to meet or exceed targets - so you have the best chance to achieve or even exceed timelines?

It's possible with Ready.

Ready is an **on-demand clinical trial learning and analytics platform** tailored for CROs and clinical trial sponsors.

Ready predicts and improves the performance of trial teams and sites by applying behavioral science to more effectively equip and assess how individuals will apply knowledge and skills in real-world scenarios.

This novel approach identifies leading performance indicators that inform operational decisions faster, revealing exactly which CRAs, investigators, sites, and team members are truly equipped to succeed in performing a study and where to invest resources to optimize the conduct of the study and better equip those that are at risk.

What is Ready?

✓ An immersive learning experience that better equips your teams.

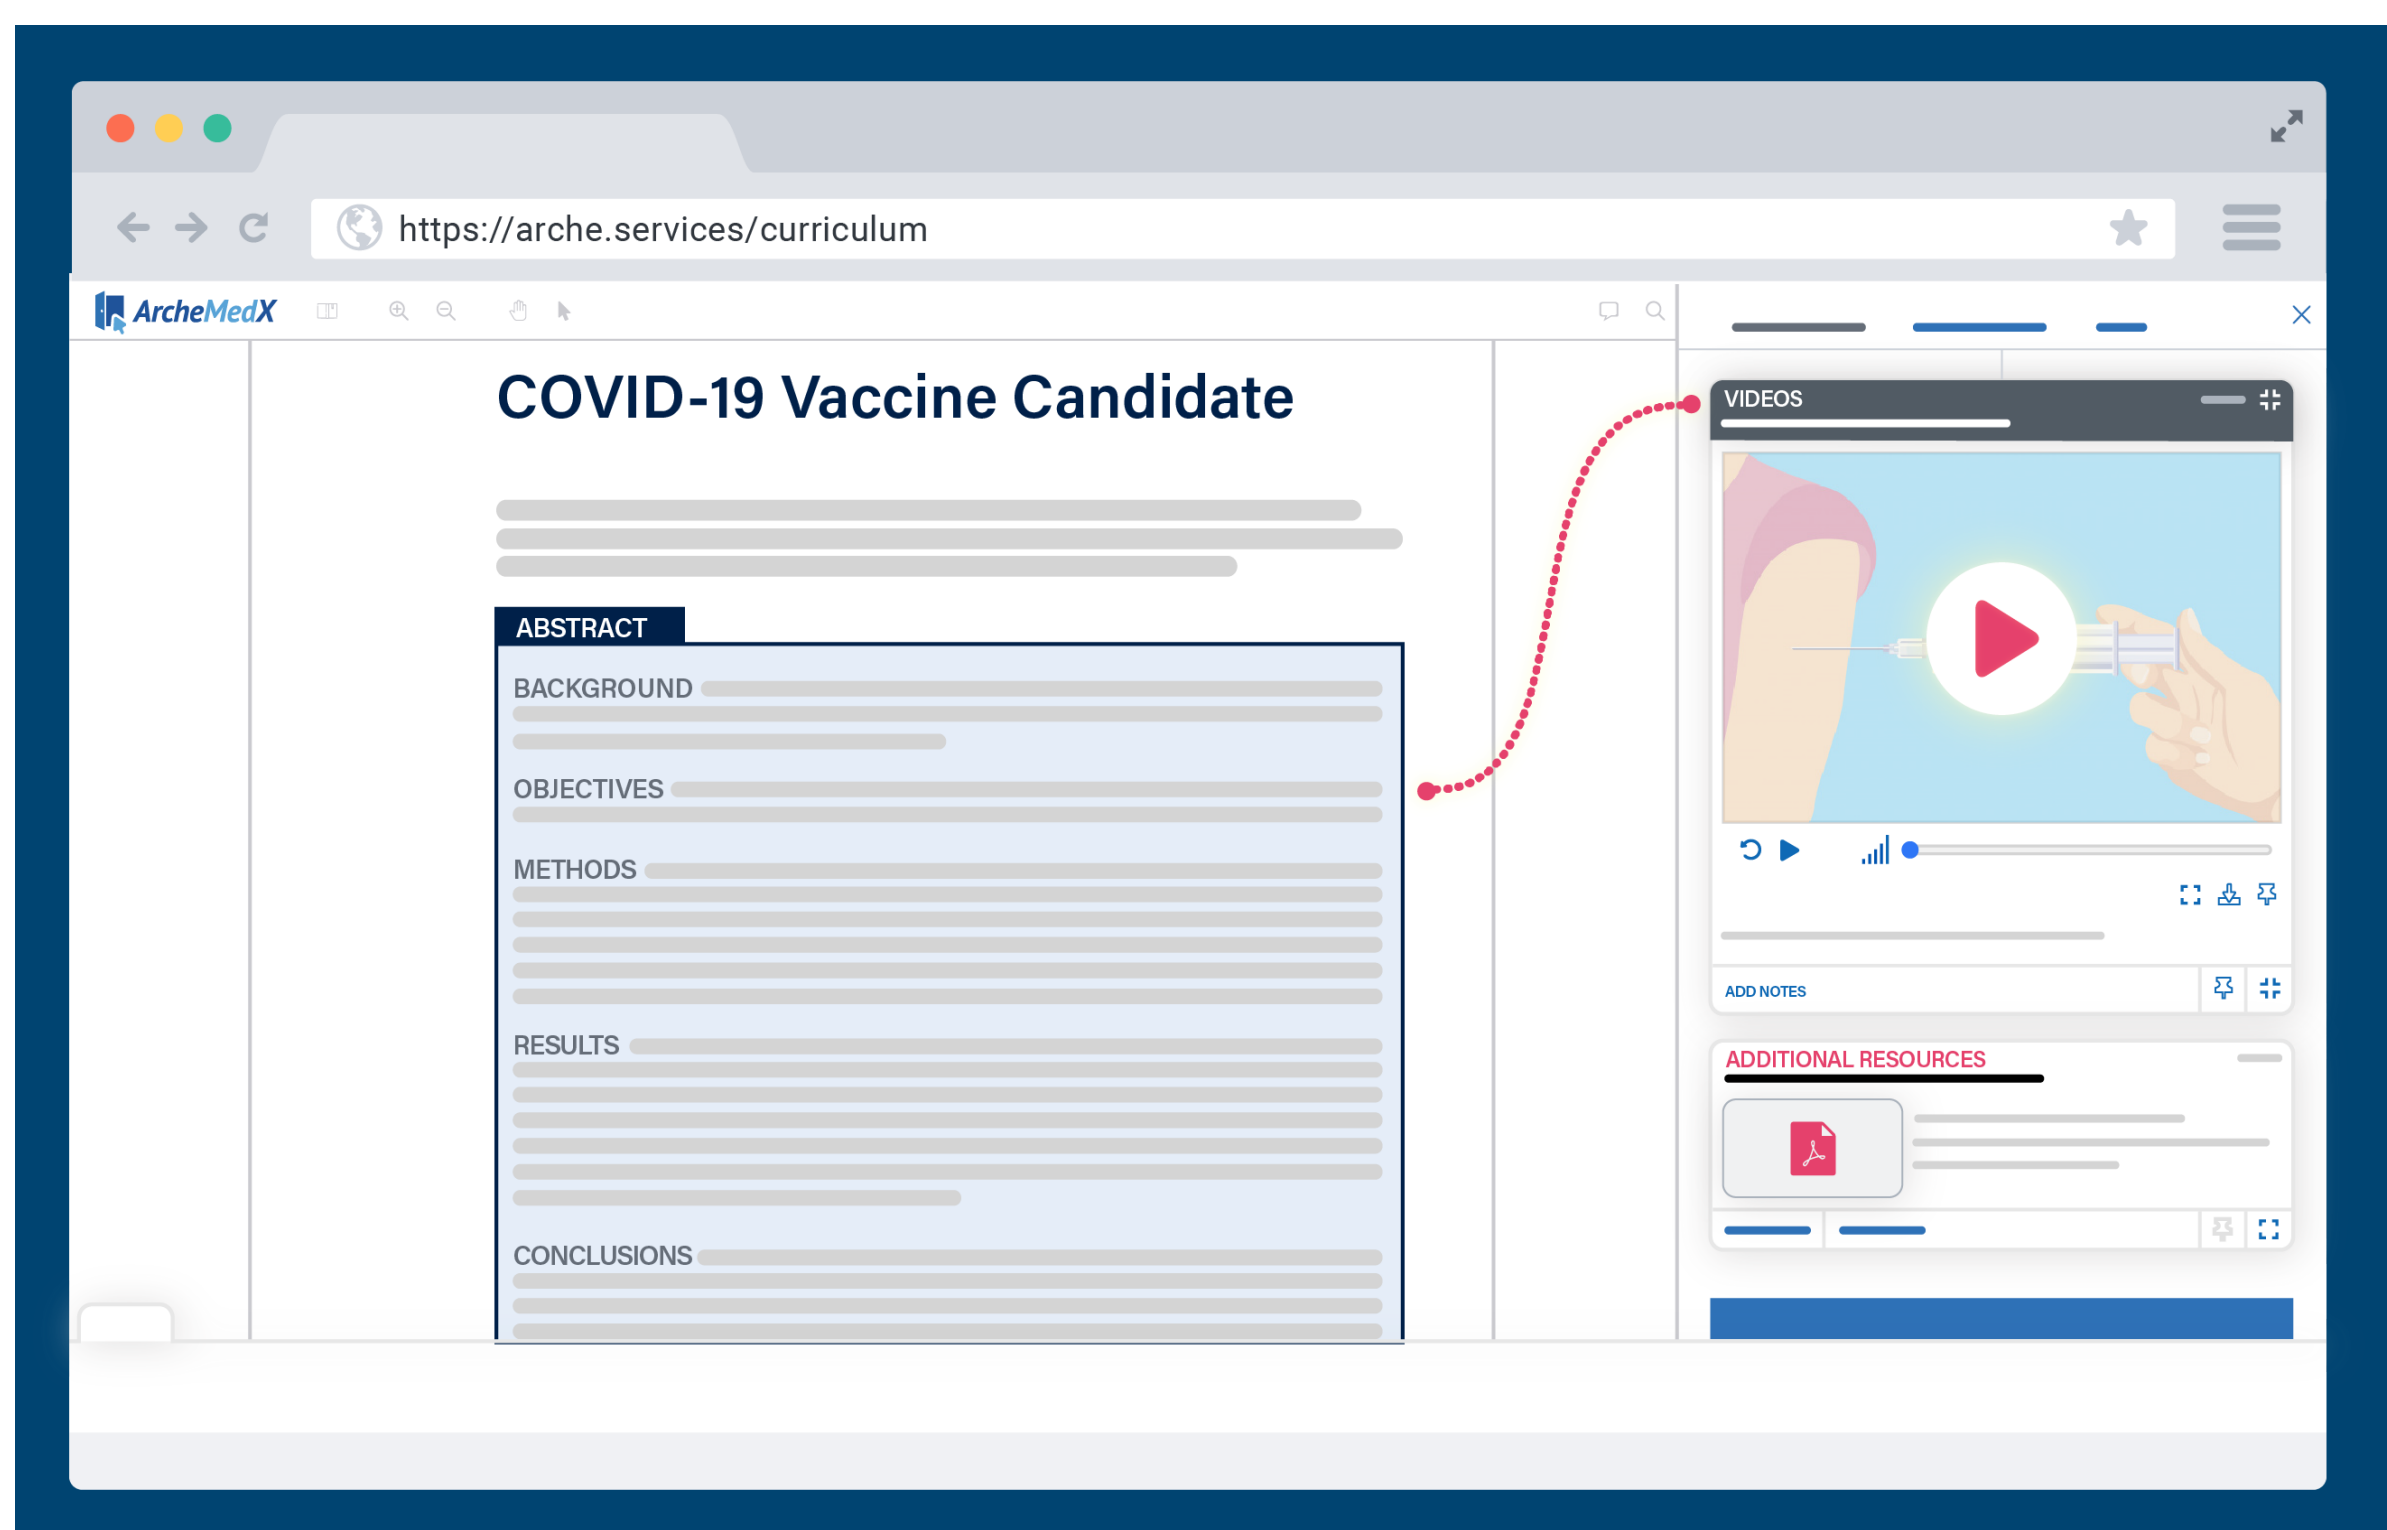

Today's remote workforce is easily distracted, especially when asked to participate in online meetings or virtual training sessions.

Ready helps you minimize these distractions by creating a more personalized and engaging digital learning experience. It achieves this by converting your traditional content (i.e., recorded training videos and essential documents such as protocols and SOPs) into more interactive learning experiences that enhance a trial team member's ability to consume and then apply critical information.

With Ready, you can nudge your teams to focus and reflect on key study objectives by making your static content come alive. These interactive learning moments engage your site and team users at the right moments to encourage critical thinking and retention of what they learned. Ready then analyzes each team member's learning behavior and confidence to predict their future performance.

Features:

- On-demand SaaS learning experience
- Support for video-based and annotated PDF learning activities
- Configurable learning objectives and role based assignments
- Agile learning moments designed to drive engagement and reflection
- Multimedia resources delivered inline and synchronized to content
- Confidence-based assessments, interactive quizzes, and test-based certification
- User-specific note-taking and personalized learning recommendations

How Can We Use Ready?

Ready enables CROs to:

- Identify high performers and remediate potential risks
- Improve team performance throughout a trial
- Decrease and even eliminate preventable trial delays
- Greatly reduce budgets and increase margins
- Demonstrate your capabilities & readiness to sponsors
- Become more competitive and win more studies

✓ Improve CRA performance

Equip CRAs or other clinical operations team members with the knowledge and skills to effectively conduct studies. Identify strengths and weaknesses - so you can manage and invest resources more effectively.

Use Ready to simplify all of your onboarding, training, and assessment for sites by dynamically equipping their staff with the knowledge and skills to effectively conduct your studies.

✓ Transform trial operations

Equip your sites to more effectively conduct studies and discover those most likely to excel. Identify risks sooner by uncovering low performers so you can take proactive steps to avoid delays.

Confidently predict how any individual will apply clinical concepts during the study. Easily discover where to invest resources and coaching – and where you have an emerging expert already.

Apply this approach to reimagine the traditional PI meeting, SIVs, and on-going site engagement into a more efficient and effective study startup model.

One CRA on my team scored highly on tests - she knew all the answers. But after using Ready, we discovered that she lacked the confidence to perform well in the field.

We avoided putting someone into a trial who may have the knowledge but isn't yet prepared to apply it.

Using the readiness score now allows us to spend time on the **right things** to grow staff.

What is Readiness?

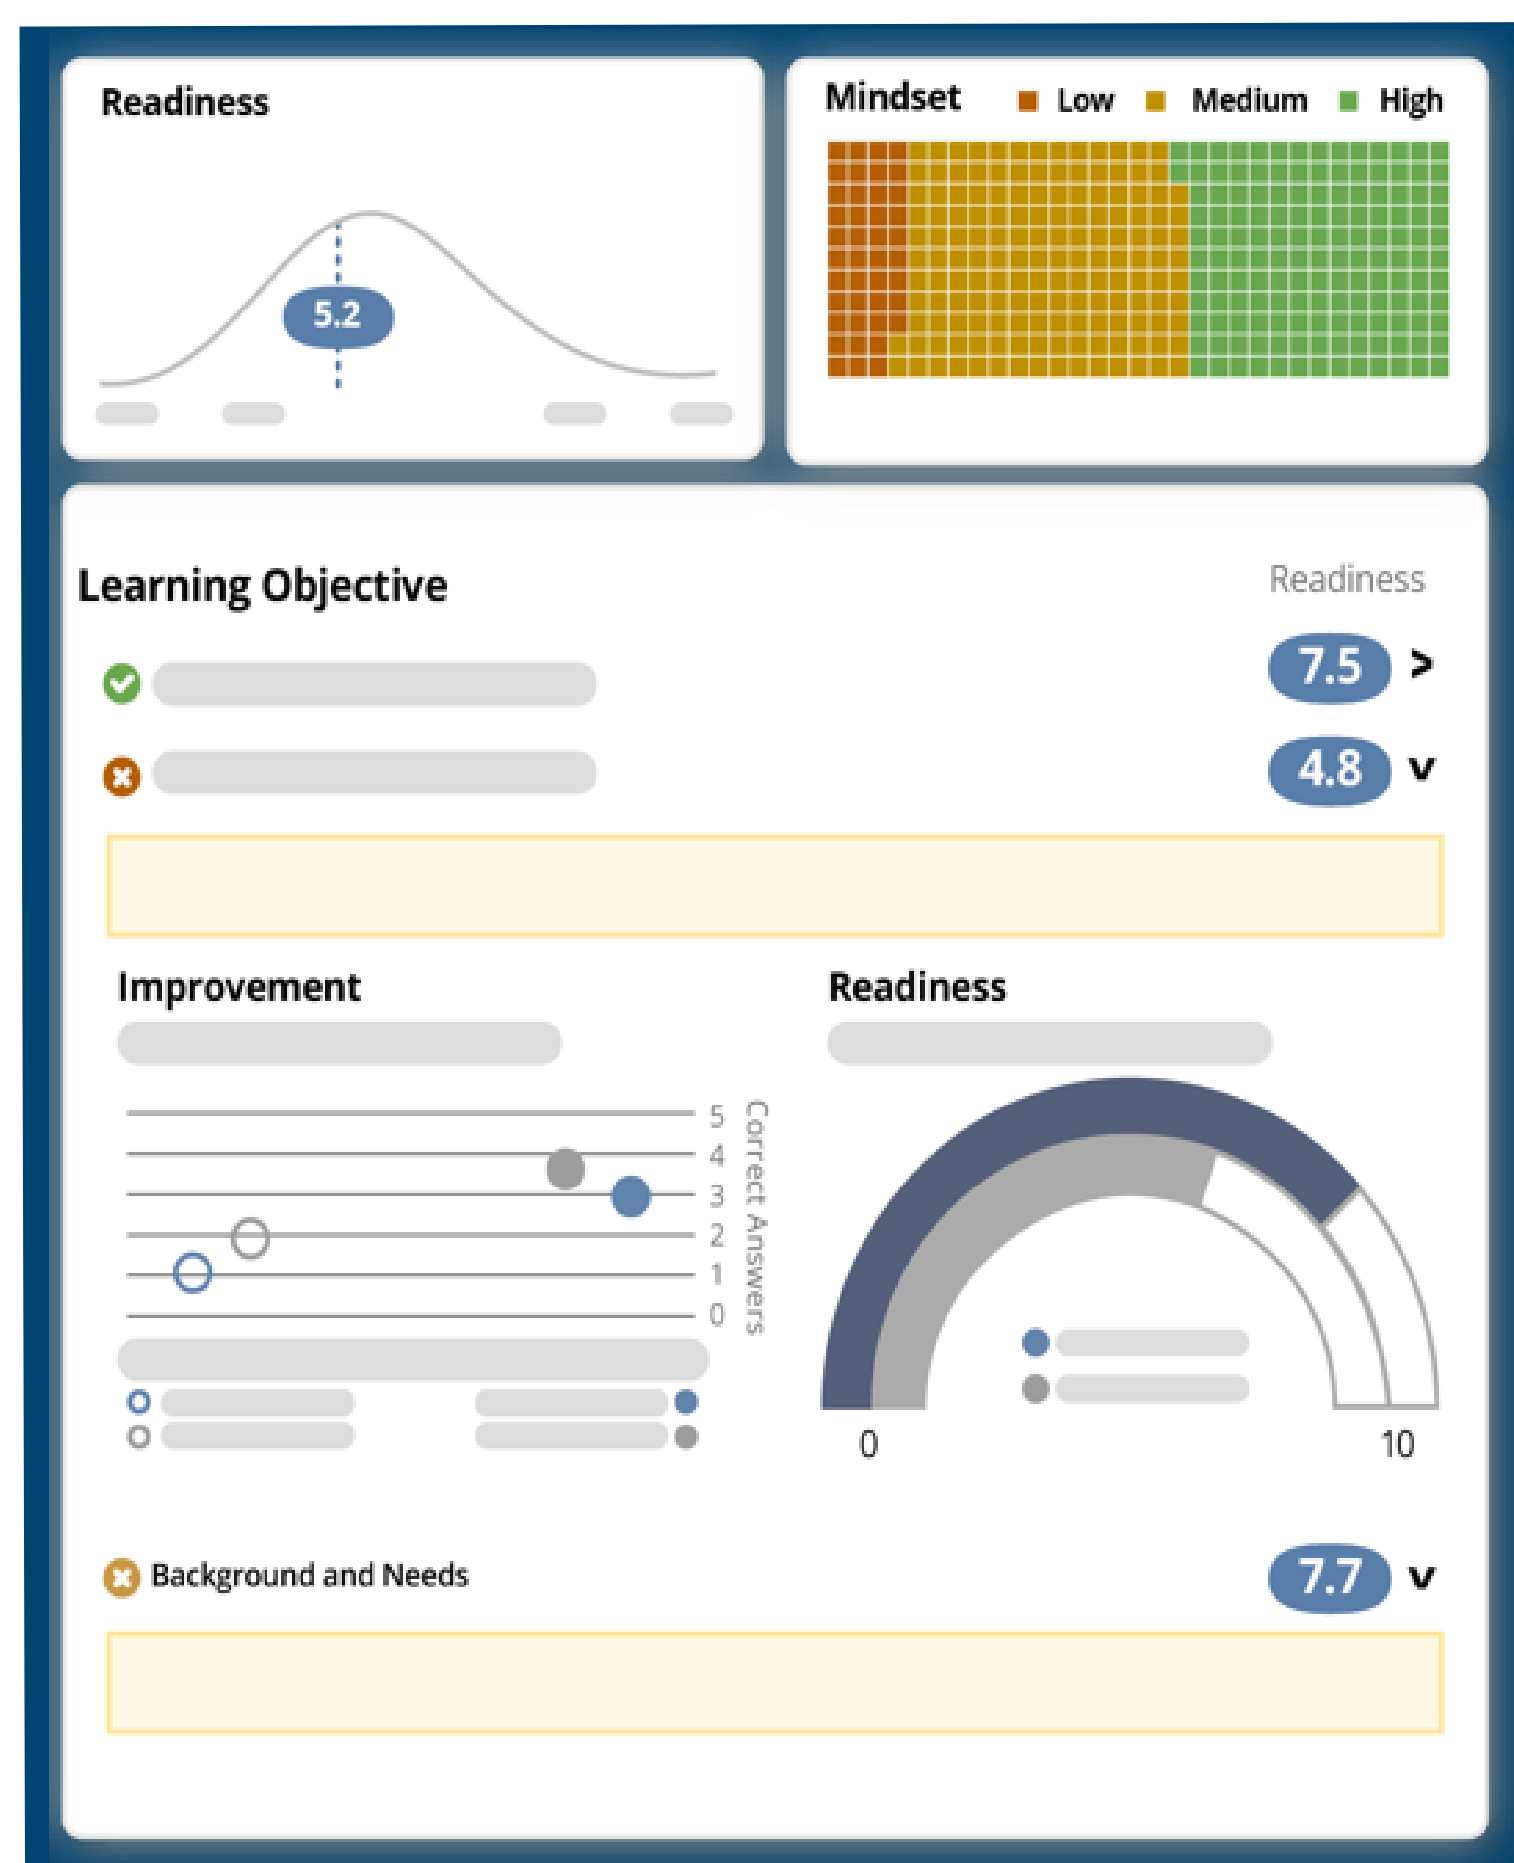

✓ A better way to assess trial personnel and sites

Traditional assessments simply calculate the number of correct answers, leaving too much room for guessing and blind luck.

Ready eliminates this risk by predicting how individuals will apply knowledge and skills in real-world scenarios. This measure, called a Readiness Score, assesses an individual's confidence, correctness, and learning mindset across key objectives to reveal those individuals and teams that not only possess the necessary knowledge, but also the ability to apply what they know in the field.

The Readiness Score includes:

- Knowledge of key subject areas and content
- Confidence in applying that knowledge
- Mindset - willingness to work to improve

Understanding Readiness by key subject area ensures you select the sites, investigators, and team members most likely to perform highly.

How does the Readiness Score help?

✓ Insights that show you the best sites and team for your clinical trial.

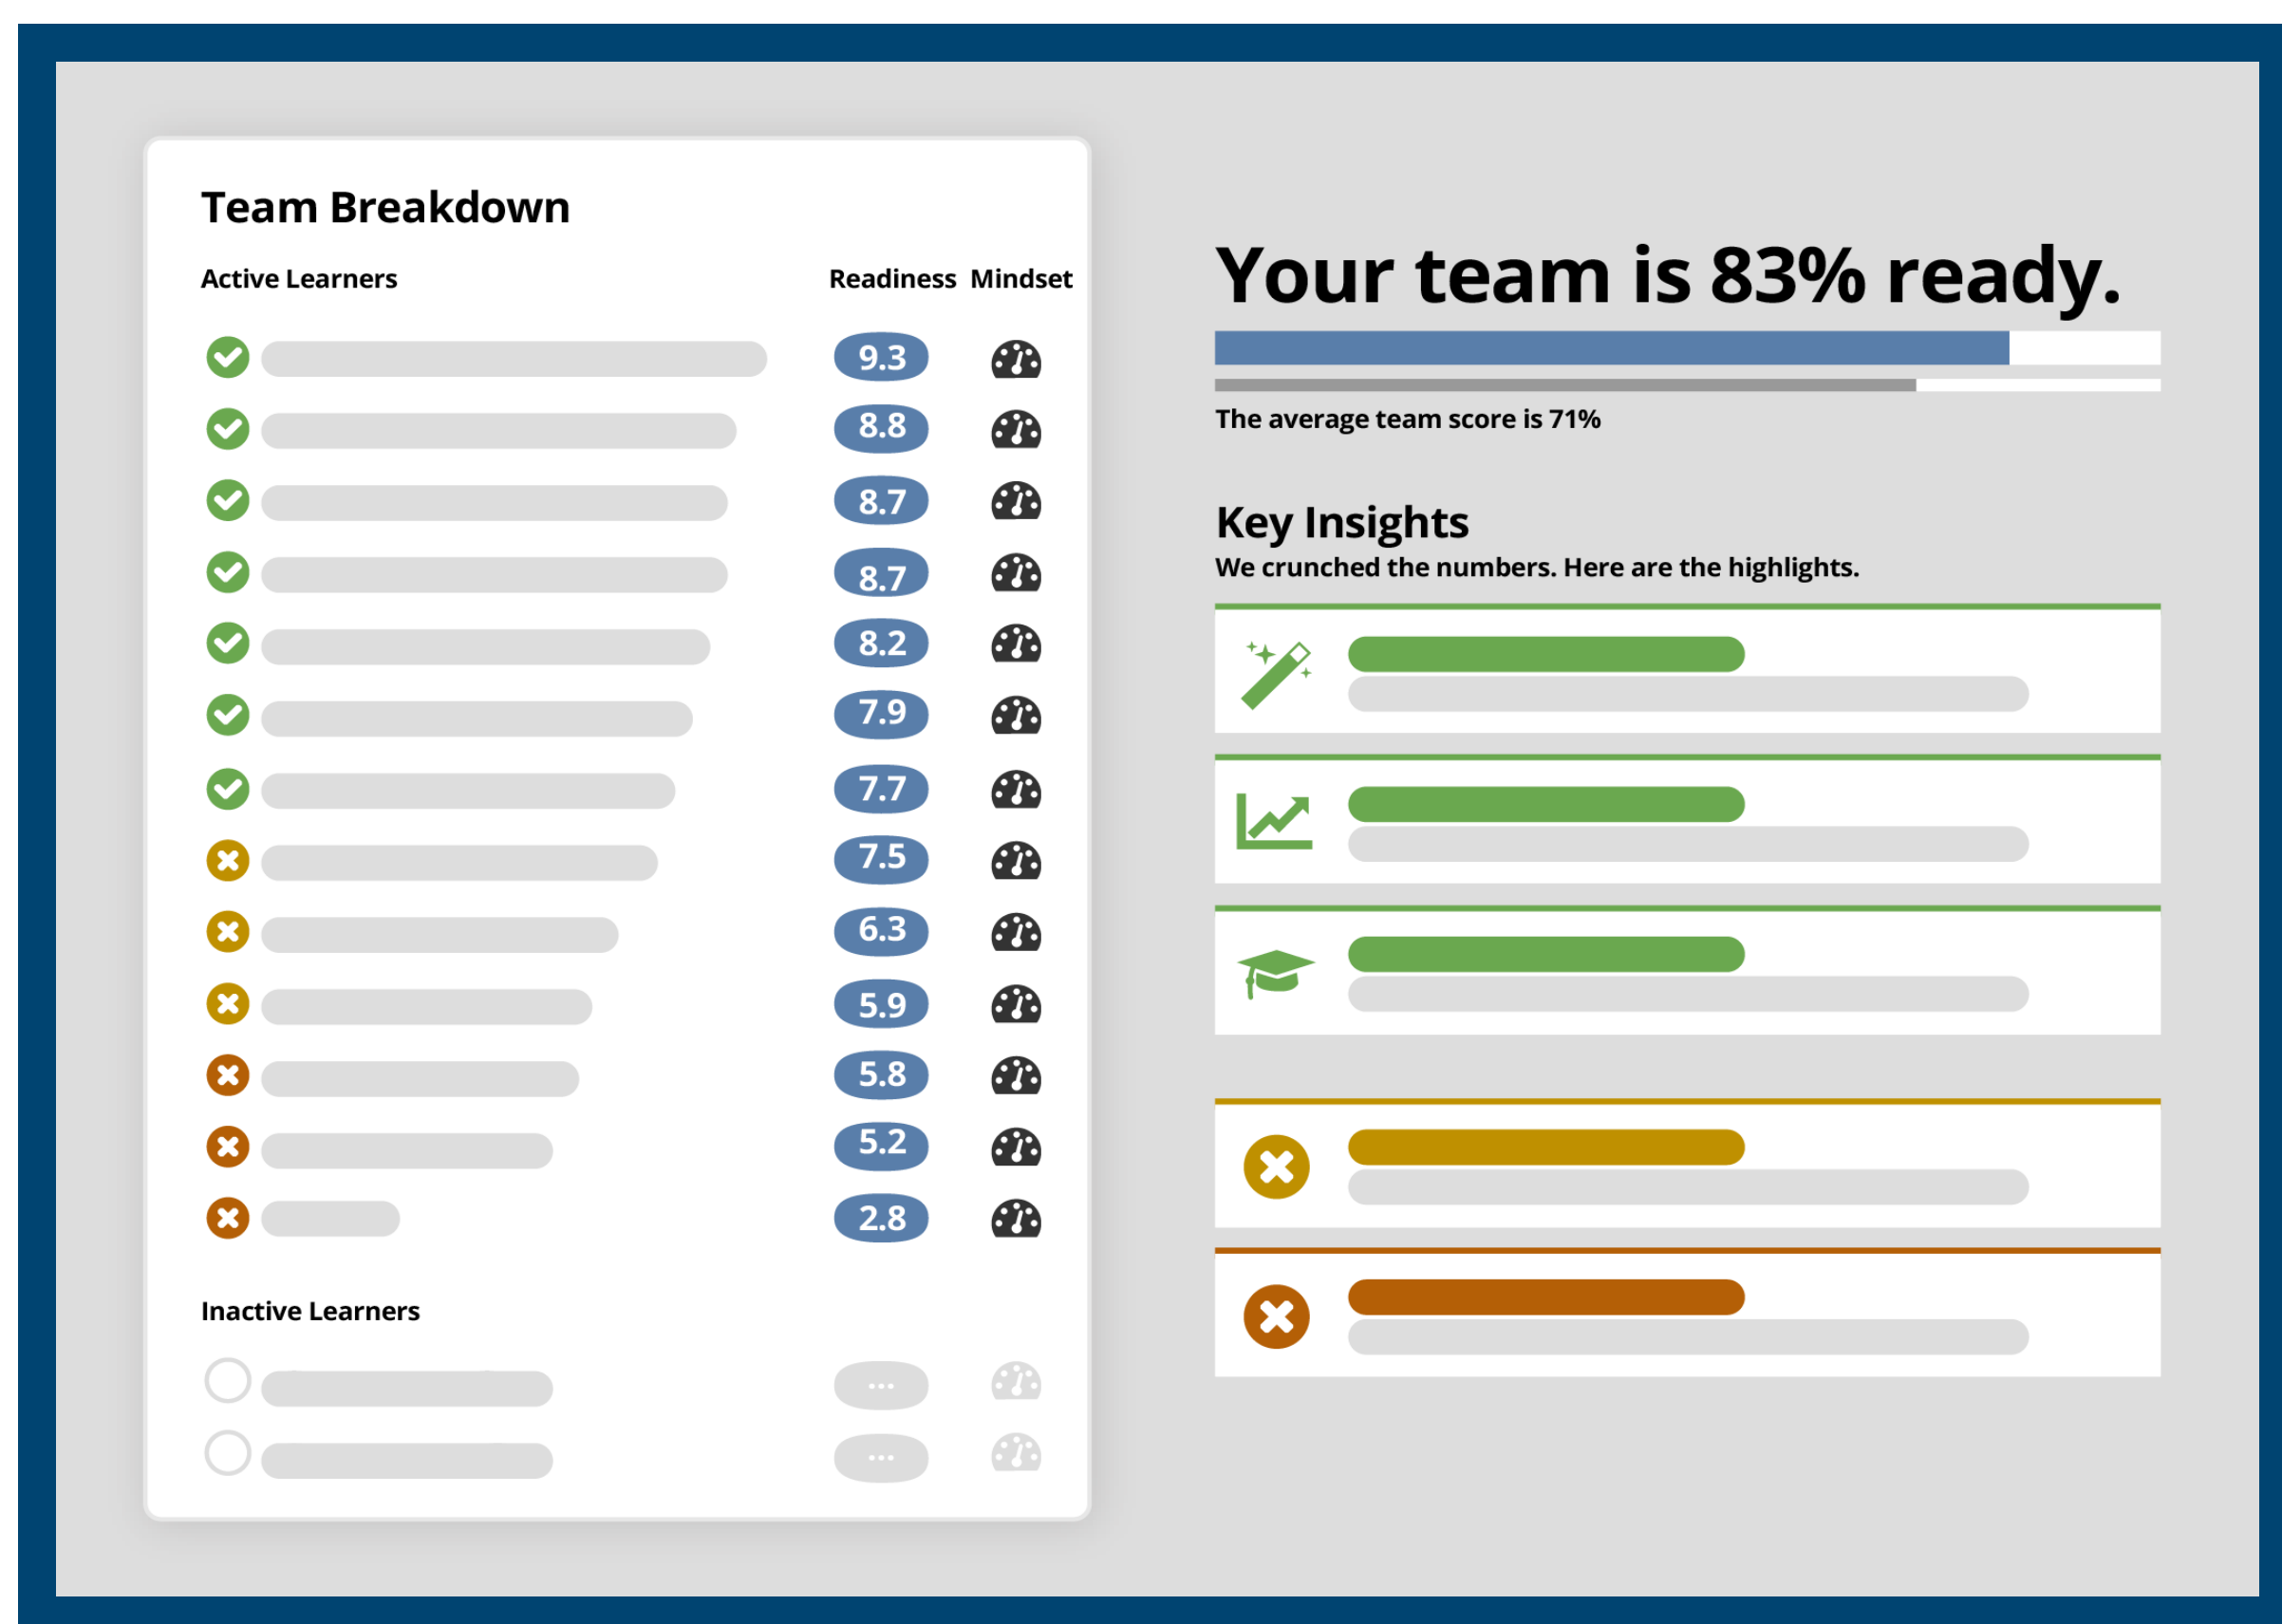

Ready provides clinical operations leaders with easily consumable options to reveal the Readiness Score for each user, site, and team you engage.

Using the Readiness Score, you can confidently select the right team and mix of sites who have the knowledge, understanding, and confidence to enroll eligible subjects quickly - and avoid missteps and deviations.

Ready also details the specific areas where an individual, site, or team requires remediation. Focus the time required to retrain and coach in only the areas where personnel need help - and target the right type of support for any given person or group.

Features

- Individual Readiness scores
- Site and team averaged Readiness scores
- Mindset analysis
- Assessment by specific learning objectives
- Comparative scores
- Improvement metrics

How does Ready keep you engaged?

✓ An automated boost system that re-engages users as they need it.

Ready can help you build and execute automated engagement and retention programs that prompt your staff and sites to focus on identified areas of need over time.

Configure the cadence, criteria, and schedule for on-going engagement - and Ready will automatically deliver your content to the team members and sites who need it the most. More importantly, it will assess how well they consume the content and intend to apply new concepts in practice. Enhance distribution of amendments, best practices, and new content throughout your study's duration.

Features:

- Automatic email delivery
- Content design interface
- Re-use pre-loaded resources and quizzes
- Configurable schedule
- Engagement tracking

Use automated boosts to re-engage your teams and sites with Ready by ArcheMedX.

*Compared to participants trained using traditional online methods, **individuals trained with Ready were 2X more likely to apply their knowledge in the field.***

EQUIP YOUR ENTIRE TRIAL TEAM WITH
READY BY ARCHEMEDX.

Ready by ArcheMedX is the clinical trials learning platform that predicts and improves performance - and eliminates delays.

Ready by ArcheMedX reveals precisely which sites, teams, and individuals are likely to be high performers in your clinical trial and enables you to remediate potential risk areas — earlier than ever before.
